

## eTHics applied: Applications in the Ethics of Technology

July 24 - August 1, 2025

International Summer School @ Technische Hochschule Ingolstadt

### About the Course:

This summer school offers an intensive course on empirical technology and AI ethics. Next to gaining knowledge on prominent topics in this field, students will be coached to develop their ideas of relevant research questions and how to address these with an empirical research project design. The course aims to bring international Bachelor students from diverse backgrounds together to discuss emerging topics in this crucial field of inquiry. We invite Bachelor students from any discipline who have a high interest in AI ethics to apply. The course fee, including course materials and fares for excursions, is 325 €. Participants also have to cover their own travel and accommodation costs. The organizers will arrange most lunches and a welcome and farewell dinner. This course has a workload of 125 hours (approx. 64 in presence, 5 ECTS). In addition to an exciting teaching concept, a social program of sightseeing and leisure activities rounds off the International Summer School 2025.

**Apply now until April 6, 2025!**

Further information on the Technische Hochschule Ingolstadt, our application process and the International Summer School 2025 can be found here:
